КЛЮЧЕВЫЕ СЛОВА: женское образование, гендерное равенство , угнетение и насилие, перспективное развитие, выделенные гранты.

Women's Education is full of complex issues and debates related to girls' and women's education (primary education, secondary education, higher education and health education). is the general concept of the program. It is gender equality (Gender equality and sexual equality, more precisely: equality between men and women is a concept that implies the achievement of equal rights between men and women in the family and other legal relations. According to some researchers , gender equality is a post-patriarchal system the next stage of socio-sexual

relations. The principle of gender equality is to study and eliminate all social barriers that prevent the emergence of a person as a person, as well as to create equal social opportunities for realizing the personality of men and women in all spheres of life.) and education includes options. Education of women and girls is critical to poverty alleviation

Uzbekistan began participating in the list of gender equality indicators in 2019. It is no exaggeration to say that in 2019, Uzbekistan took 62nd place among 189 countries in terms of gender equality. According to United Nations experts, 29 out of every 100,000 women die in Uzbekistan. gender inequality, early birth is observed in girls aged 15-19. Inequalities in education for girls and women, such as barriers to girls' access to school or challenging situations such as violence against women, prevent women from getting an education. But in some Western countries, the level of education of women has risen to a higher level than that of men. For example, many master's and doctoral students are developing in the USA. Is it not possible for us to develop such equality? Violence against female teachers became a political issue in Sweden between 1900 and 1940. In 1900, 66 percent of teachers in Sweden were women, most of whom worked in areas free from the threat of male violence or in isolated rural areas. Politicians have discussed a range of solutions to issues such as providing female teachers with guard dogs, guns and telephones. Currently, in Uzbekistan, the educational opportunities of girls in need of social protection have been expanded, and 4 percent state grants have been allocated to higher education institutions.

In this case, 70 percent of the expenses incurred by women in non-governmental educational organizations for vocational and entrepreneurship studies, but not more than 1 million soums per graduate, will be reimbursed by the state.

Because, in fact, if a woman is educated, her children will be intelligent and capable. More importantly, if a woman is knowledgeable, the nation will be knowledgeable.
